### **D-Tools System Integrator 4 (SI 4)**

*Thank you for choosing D-Tools SI 4 software. You have joined the growing number of companies using the most complete software solution for the System Integration Industry!*

#### **Here are some quick tips to help you get started.**

1. **Disable any anti-virus software before installing Visio and D-Tools.**  
This can usually be accomplished by right clicking on the anti-virus icon located on the lower right corner of your screen and selecting disable.
2. When installing Visio, use the custom option then run 'all from my computer' option instead of the typical installation option.
3. Make sure that Visio and Microsoft Word have been opened at least once before installing D-Tools SI 4.
4. This version of D-Tools SI 4 includes the access to the entire Manufacturer Partners product database. For the latest information, we encourage you to do the data update via the D-Tools Web Update.
5. The Cost Factors password is dttools789
6. Don't start with your biggest projects, start with the sample project. This will allow you to get familiar with the software.
7. D-Tools contains over three hours of personalized video instructions. These can be found in the Help Video from the menu and on the Navigator. These videos are in the AVI format and need a compatible player like Microsoft Media Player 7.
8. D-Tools Web Updates and DataXchange will only work with registered D-Tools users. Unregistered Users may view the data available but are not able to download.
9. For technical support problems please go to the D-Tools Support Bulletin Board located at [www.d-tools.com](http://www.d-tools.com) under the support section. You may also reach technical support at: 866-386-6571 x 2 or [support@d-tools.com](mailto:support@d-tools.com)
